26	Custom Label and Tape Artwork Information

Even if a self-adhesive tape can be applied on almost all materials, evaluation of the application parameters and conditions before making a choice is advised.

Application Surface

Normally, self-adhesive tapes are compatible with a majority of application surfaces and materials, but certain surfaces may have low compatibility or anti adhesive properties. In some cases, the adhesion may be affected by chemical interaction. It is always recommended to carry out compatibility tests before use.

LOW COMPATIBILITY SURFACES INCLUDE:

- Polystyrene
- Powder coated paints
- Acetal Plastic
- Polypropylene

Other low compatibility surfaces include:

PVA, EVA, Polyethylene, PTFE and fluoride film

SOME HIGH COMPATIBILITY SURFACES INCLUDE:

- Stainless Steel
- Polyester
- Aluminium
- Nylon

Other High compatibility surfaces include:

Copper, Zinc, Tin, Lead, Glass, Porcelain, Acrylic and Rigid PVC.

Primers

Tape primers may increase the compatibility of the surface and the adhesive tape. Please speak to one of Pomona's technical staff or email sales@pglgroup.co.nz to discuss our primers and if they are right for your application.

Conditions of use

The best temperature for application ranges between is 15°C and 25°C in a dry environment, and it is not recommended to apply the tape with temperatures lower than 10°C. Even if a tape is recommended for cold temperatures, it is best to apply the tape in the normal temperature range first. If application temperatures are substantially different from the recommended temperature range, the adhesive can behave differently according to its chemical nature.

For the best results please consider these recommendations

- Application surfaces should be dry and free from dust particles.
- Do not apply on surfaces treated or contaminated by anti-adhesives.
- Do not use paint containing additives which could reduce the adhesive properties of the tape.
- Avoid surfaces containing plasticisers or other chemical agents not compatible with the tape.
- In case of rough or irregular surfaces, it is better to use a tape with a higher quantity of adhesive.
- Some tapes may need the assistance of extra tools such as a pressure roller for better bonding results.
- Please refer to the product's technical data sheet for more information on final bonding times and testing results performed in Pomona's lab.

Tape Storage

Ideally store tape between 15°C and 25°C with a maximum relative humidity of 65%. Always store away from heat sources, avoiding exposure to light and if possible, keep in the original packaging. When temperatures are lower than 15°C it is highly recommended to recondition the adhesive tape to normal temperatures (15°C and 25°C) before use.

Tape Shelf Life

Self-adhesive tapes technical features are generally not permanent but remain at their best for approximately 12 months if stored according to the suggested conditions and by avoiding extreme environmental conditions such

as sudden temperature changes, exposure to UV light and high levels of humidity.

Kakariki Eco-Friendly Ranges

The Pomona Tapes Kakariki range offers a range of environmentally friendly alternative products to traditional plastic packaging tapes, where the rubber adhesive gives them excellent adhesion to a wide range of cardboards.

The eco-friendly Kakariki range includes Clear rPET Packaging Tape, Custom Printed Water Activated Gum Paper Tape that is 100% recyclable, Natural Cellulose Clear Packing Tape, Paper A4 Plain Labelopes, Paper Labels, Paper Machine Carton Sealing Tape, Paper Packaging tape and Paper Invoice Enclosed Labelopes.

Hand Packaging Tapes

The Pomona range of high quality pressure sensitive packaging and carton sealing tapes are an excellent choice for New Zealand's various grades of board and carton, as well as the environmental variations. These packaging tapes are specially formulated using BOPP and vinyl films and coated with premium grade acrylic, hot melt and solvent rubber adhesives.

Labels on a Roll

Pomona's printed labels on a roll are clean, efficient and cost effective. Each perforated label is laminated with clear plastic, making a waterproof and durable label, ideally suited for outdoor and long term applications. With no messy release paper to dispose of, our labels make for clean efficient application and are made in Auckland, New Zealand.

Custom Printed Products

Custom printed tapes are an inexpensive marketing tool that can turn every parcel, carton or package into a valuable form of advertising and brand recognition. The Pomona custom printed tape division makes high quality, sharply defined print in-house, that many national and international organisations entrust to reproduce their valuable branding. Custom printed artwork requirements are on page 26.

Cloth Tapes

Waterproof, weatherproof, strong and hand tearable, Pomona cloth tapes are available in gloss and matt finishes with numerous PE cloth and rayon mesh films. Top-quality high tack rubber adhesive and a wide range of bold colours make this range the perfect choice in construction areas, sound and lighting, bookbinding and general DIY applications.

Masking Films

Pomona's interfold, pre taped and combination masking films are all made from corona treated, high density polyethylene film. Available in a number of sizes for all residential, automotive and industrial masking applications. Non-porous, anti static clear film material resists paint penetration and clings to the desired surface preventing paint overspray.

Washi Tapes

Pomona washi masking tapes are made from strong, ultra-thin paper, delivering clean, straight paint lines. With six types in the range, there's a perfect option for every surface—from rough exteriors to freshly painted walls. Designed for versatility and durability, they offer UV and weather resistance and adhere well to a variety of surfaces including trim, painted walls, timber, steel, glass, and plastic.

Double Sided Tissue Carrier

Tissue carriers offer appreciable stretch resistance, while at the same time facilitating the application on different types of substrates, irregular, smooth or rough. These products, which can be torn by hand, are easy to handle, offer even quality and uniformity in all applications. Easy to apply, laminate, cut or even tear by hand, double-sided non-woven tissue tapes are particularly suited to kiss-cutting, sail making and non stop splicing applications.

Single Sided Foam Tapes

Please refer to our Danco range of quality single sided foam tapes. www.danco.co.nz

Double Sided Foam Carrier

High performance adhesive foam tapes offer excellent UV, temperature, oil, solvent resistance and conformability on all substrates. Designed for complex fixtures and assembly scenarios. Used in state-of-the-art-edge industries, their foam backings and variable densities ensure strong, definitive bonding inside or out.

Double Sided PHB Tapes (Permanent High Bond)

Pomona PHB tapes provide convenient, simple fastening, ideal for use in many interior and exterior bonding applications. Highly durable, with good solvent and moisture resistance that give PHB tapes their unique characteristics. The specially formulated adhesive allows a high level of adhesion to a wide range of substrates. Available in customised widths and in a number of different thicknesses.
